

sterilization validation

All sterilization processes require validation of the efficacy and reproducibility of the process. Depending on the type of sterilization, this may be accomplished by partial, sub-lethal, or repetitive processing, using representative product and/or biological challenges.

WuXi AppTec offers a full range of services for the following commercially available sterilization methods:

Radiation

- Method 1 • Method 2 • VDmax

Dose audit reminder programs are also available.

Ethylene Oxide (EO)

validation program options

Our service options let you choose a level that best suits your particular needs – from testing alone to total project management resulting in a complete validation package.

Testing Services Only

All the required laboratory testing is performed for the validation, along with any lot release testing to monitor process controls.

Testing and Sterilization Services

In addition to the required testing, hands-on coordination of the sterilizing services is performed, including all interaction with the sterilizer, and confirmation and verification of sterilization.

Total Management of Your Validation

In addition to performing all of the required testing and coordinating the sterilization services, this turnkey option results in a final, submission-ready report manual complete with all the needed supporting documentation.

Talk to us and find out how our sterilization validation services can work for you.
